

ABSTRACT

Providing instrumentation data relating to a logic design element generally includes using a logic design element in a logic design, performing a simulation of the logic design that includes simulating the logic design element, and having the logic design element automatically collect the instrumentation data during the simulation, where the instrumentation data relate to the logic design element. A query may be received to display the instrumentation data relating to the logic design element and the instrumentation data relating to the logic design element may be displayed in response to the query.
